Professional Summary

UX and DesignOps leader with 19+ years in digital design, from web design in 2007 to leading enterprise UX for Saudi government platforms. At Saudi Public Security I lead the internal design team, direct the design work of external vendor teams, and created and govern the AMN Design System that both build on. I bridge UX design, design systems and frontend implementation: I write the HTML, CSS, SCSS and JavaScript behind the components I specify, so design decisions hold up in production across Arabic-first, RTL web and mobile products.

Career Highlights

- **Design system creator and owner:** built the AMN Design System across Figma, a Bootstrap-based HTML/SCSS library and a 38-page bilingual documentation site; named Design System Owner with final approval on changes and releases.
- **DesignOps governance:** established versioned releases, a contribution review that needs designer and engineer approval, a breaking-change policy and a partner handover workflow for vendor teams.
- **Hands-on frontend development:** wrote and maintain the design system's Bootstrap-based SCSS architecture (236 token variables and 30+ component partials compiled into one stylesheet), and rebuild components such as breadcrumbs and image cards in code to match the Figma spec, including RTL mirroring.
- **Career progression:** Junior Web Designer (2007) → UI Designer (2012) → Interface Development Specialist (2019) → UX Design Lead (2025).

Current Leadership Scope

Internal design team
Lead the internal design team. Set design direction, coordinate work across products, review designs before handoff, and hold UX/UI standards and design system use.

External vendor teams
Give design direction and feedback to designers at external vendor companies, review their deliverables for design system compliance, and align them with the internal team.

Developers & stakeholders
Work with business analysts, developers and QA on scope and handoff, and review implementation with internal and vendor developers before release.

Professional Experience

Saudi Public Security · Riyadh
Jan 2023 – Present

UX Design Lead

Joined as UI/UX Designer in January 2023; promoted to UX Design Lead in July 2025.

Lead UX and the design system for the AMN Platform, an enterprise platform of 14 systems, and Midan, a separate field app for mobile and web that brings selected services from those systems together, such as security cases and violations. All are Arabic-first, RTL products for operational workflows.

- **Design system architecture:** Architected the AMN Design System: Figma components and design tokens for color, typography, spacing, radius and component states; a Bootstrap-based HTML/SCSS component library; and bilingual documentation covering foundations, components, patterns and governance, with a searchable library of 4,371 icons in 61 categories.

- **Component standardization:** Documented shared components on one template (anatomy, states, Figma properties against the code API, accessibility, RTL, do and don't), covering buttons, text fields, tables, tags, file uploaders, alerts, notifications, steppers, breadcrumbs and person and vehicle cards. Retired duplicate components and introduced new component classes while keeping legacy styles for screens already in production.
- **DesignOps & governance:** Established semantic versioning, a bilingual changelog, a contribution workflow with one designer and one engineer approval, a breaking-change policy with migration guidance, and an exception and escalation process.
- **Vendor design governance:** Wrote the Partner Handover & Contribution Governance Workflow. Vendors receive a versioned release, reuse approved components, propose changes through central review, and never edit the shared SCSS. Currently bringing 3 platforms built by other companies onto the design system.
- **Frontend development & UI QA:** Translate Figma components into HTML and SCSS on Bootstrap; organized the SCSS into helpers, components, common and page layers compiled into one stylesheet; apply design tokens as SCSS variables; implement responsive layouts and RTL mirroring; and review internal and vendor implementations against the design before release.
- **UX practice:** Run heuristic evaluations, as-is service analysis, competitive analysis and information architecture work to shape new modules before they reach detailed design.

National Housing Company (NHC) · BS – Technology · Riyadh

Feb 2019 – Dec 2022

Interface Development Specialist · UX/UI design and frontend development

- Designed enterprise web interfaces and built them myself: from wireframes and high-fidelity prototypes to responsive production pages in HTML, CSS, JavaScript and Vue.js.
- Built UI kits and reusable frontend components that served as the shared reference for product, engineering and QA teams, keeping production UI consistent with the design specifications.
- Worked with business analysts, developers and QA testers so releases matched the UX and UI specifications, and documented interactions for developer handoff.

Majmaah University · Deanship of Information Technology

Mar 2016 – Jan 2019

Web Designer · contracted through an external company

- Designed and built the frontend (HTML, CSS, JavaScript) of university portals and web applications for students, faculty and staff.
- Contributed to the University Web Portal, Electronic Services Portal, Recruitment Portal, University Housing Portal, Survey System and Technical Support System.
- Worked directly with deans and IT leadership on new services and on improving existing systems.

SURE International Technology

2012 – Feb 2016

UI Designer

- Designed and coded (HTML/CSS) interfaces for government and university clients, including the National Guard, the Saudi Food and Drug Authority and Shaqra University.

Jazan University · E-Portal Unit

May 2012 – 2013

UI/UX Designer & Developer

- Wireframes, frontend development (HTML, CSS, JavaScript) and graphic design for university e-portal services.

Earlier Career · Web Design · several companies

2007 – 2012

Junior Web Designer → Web Designer

- Web interface design and HTML-based page building, the base for the UI/UX, frontend and design system work that followed.

Selected Projects

AMN Platform

Saudi Public Security · UX Design Lead

CONTEXT Enterprise web platform of 14 systems for operational security workflows, with dense Arabic data and several delivery teams, including vendors.

CONTRIBUTION Led UX across modules and defined shared patterns such as person, vehicle and entity cards, steppers, timelines, data tables and file uploaders; reviewed vendor designs against the design system.

VALUE A consistent interface across modules, whichever team builds them.

Midan (Mobile & Web)

Saudi Public Security · UX Design Lead

CONTEXT Separate field app for mobile and web that brings selected services from the platform's systems together, such as security cases and violations.

CONTRIBUTION Mobile components and interaction patterns (navigation bar, tabs, steppers, uploaders, input fields with voice, scan and fingerprint actions), and responsive web screens built on the same tokens and components.

VALUE One component set across mobile and web, consistent with the core platform.

Human Rights Commission (HRC)

Freelance · UI/UX Designer · 2021 – 2022

CONTRIBUTION Led UX/UI in a team of four over a five-month redesign: sketches, wireframes and prototypes for new layouts, then rebuilt pages with the developers in HTML, JavaScript and Vue.js.

Core Expertise

Frontend Development & Design-to-Code
HTML5 · CSS3 · SCSS/Sass · JavaScript · Bootstrap · Responsive Design · RTL Implementation · Design Tokens · Component-Based UI Development

Design leadership
Design direction · Design reviews · Vendor design governance · Stakeholder alignment

Design systems
Design tokens · Figma variables and components · Component APIs · Versioning · Documentation

DesignOps
Contribution and review workflows · Release notes · Handoff standards · Design QA

UX & product design
Information architecture · Heuristic evaluation · Complex forms and data tables · Prototyping

Accessibility & localization
WCAG 2.1 principles · Arabic-first and RTL interfaces · Bilingual documentation

Tools: Figma · Adobe XD · Vue.js · Git/GitHub · Jira · Notion

Certifications & Training

Design System Bootcamp
Maven · Aug 2025

PMI-ACP, Agile Certified Practitioner
PMI · Aug 2022

Google UX Design Professional Certificate
Google / Coursera · Aug 2022

Creating a Design System with Adobe XD
LinkedIn Learning · Jan 2021

Customer Experience: Journey Mapping
LinkedIn Learning · Aug 2020

UX Foundations: Interaction Design
LinkedIn Learning · May 2020

Web Design & Development Training
IBM Education Services · 2007

Education

Bachelor of Physical Education
Al-Azhar University · 2009

Languages

Arabic — Native
English — Professional working proficiency
